~~Examiner: Sorenson~~

Patent and Trademark Office Board of Patent  
 Appeals and Interferences

Appeal No. 640-98

Opinion dated May 28, 1987

United States Patents Quarterly Headnotes

**PATENTS**

**[1] Patentability/Validity — Adequacy of disclosure [Enablement] (§ 115.11)**

Erroneous use of term "amines," when person having ordinary skill in art would have understood proper term to be "imines," is not sufficient to show that inventor did not have possession of that subject matter.

**PATENTS**

**[2] Patentability/Validity — Adequacy of disclosure [Enablement] (§ 115.11)**

Specification disclosure that presented five working examples of binuclear copper complexes of carboxylic acids, as well as pictorial representations thereof, reasonably conveys to skilled artisan that inventor had possession of that subject matter.

**\*1462** Application for patent by John R. J. Sorenson, Method for Treating Convulsions with Organic Copper Compounds, Serial No. 344,309, filed February 1, 1982, continuation of Serial No. 154,132, filed May 29, 1980. From decision refusing to allow claims 25 through 27. Reversed.

Harry C. Jones, III, Jennifer Gordon, and Pennie & Edmonds, New York, N.Y., for appellant.

Before Winters, Steiner, and W. Smith,  
 Examiners-in-Chief.

Winters, Examiner-in-Chief.

Appeal from the examiner's decision refusing to allow claims 25 through 27. Claims 22 through 24 and 36 stand allowed. Claims 28, 31 through 35 and 37 through 39, which are the only other claims remaining in this application, stand objected to as depending from a rejected claim.

Claim 25 is representative:

25. A method of treating convulsive tremors or convulsive seizures comprising administration to mammals of a therapeutically effective amount of an organic compound of copper having anticonvulsive activity selected from copper complexes of imines and binuclear copper complexes of carboxylic acids, or mixtures thereof.

The examiner does not rely on any prior art references. Nor does he set forth a prior \*1463 art rejection. Rather, the sole issue presented for review is whether the examiner correctly rejected claims 25 through 27 under 35 USC 112, first paragraph, as not adequately supported by a written description in the specification.

*OPINION*

We shall not sustain this rejection.

Having reviewed the rejection in light of the opposing arguments of record, we agree with appellant that the claimed subject matter is adequately supported in appellant's specification disclosure and, therefore, that the appealed claims comply with 35 USC 112, first paragraph. Essentially, we are in full agreement with the position set forth by appellant in his Brief. We shall therefore adopt that position as our own, adding the following remarks for emphasis only.

The examiner brings to our attention the following recitations in the claims on appeal: (1) "copper complexes of imines", (2) "binuclear copper complexes of carboxylic acids", and (3) "a binuclear copper complex of an aliphatic carboxylic acid or binuclear copper complex of an aryl carboxylic acid". Focusing on the written description requirement of 35 USC 112, first

3 U.S.P.Q.2d 1462  
 1987 WL 124287 (Bd.Pat.App & Interf.)  
 (Cite as: 3 U.S.P.Q.2d 1462)

Page 2

paragraph, the examiner takes the position that those recitations do not appear in appellant's original disclosure and, moreover, that they are not adequately supported by the examples in the specification disclosure.

The examiner does not deny that appellant's specification supports the broad expressions "an organic compound of copper", "copper complexes of carboxylic acids", the "copper complex of an aliphatic carboxylic acid", and the "copper complex of an aryl carboxylic action". Rather, the examiner asserts that appellant's specification disclosure does not support the above-noted, narrower expressions. We recognize that, under certain circumstances, the description requirement of 35 USC 112, first paragraph may operate to defeat the patentability of a narrow but not a broader claim. *In re Smith*, 458 F.2d 1389, 173 USPQ 679 (CCPA 1972). By the same token, we are mindful that appellant's specification need not describe the claimed invention in *ipsis verbis* to comply with the written description requirement. *In re Edwards*, 568 F.2d 1349, 196 USPQ 465 (CCPA 1978). The test is whether the originally filed specification disclosure reasonably conveys to a person having ordinary skill that applicant had possession of the subject matter later claimed. *In re Kaslow*, 707 F.2d 1366, 217 USPQ 1089 (Fed. Cir. 1983). By the very nature of the inquiry under this statutory provision, each case turns on its own specific facts. *In re Edwards*, 568 F.2d at 1352, 196 USPQ at 467. As stated in *In re Wilder*, 736 F.2d 1516, 222 USPQ 369 (Fed. Cir. 1984), the inquiry into whether the description requirement is met must be determined on a case by case basis and is a question of fact. Moreover, the examiner has the initial burden of presenting evidence or reasons why persons skilled in the art would not recognize in appellant's specification disclosure a description of the invention defined by the claims. *In re Wertheim*, 541 F.2d 257, 191 USPQ 90 (CCPA 1976).

Here, the examiner states that the claim expressions at issue "do not appear in the original disclosure", which means to say that they do not find literal support therein. See the Examiner's Answer, page 2. Further, the examiner states, the expressions "are not adequately supported by the few specific compounds in the specification". Again, see the Examiner's Answer, page 2. Based on those pronouncements, the examiner concludes

that appellant's claimed subject matter is not supported by a written description in the specification as filed. Quite clearly, however, the examiner has not met his initial burden of presenting evidence why a person having ordinary skill in the art would not recognize in appellant's specification a description of the invention defined by the claims. *In re Wertheim*, *supra*. Furthermore, the only reasoning presented which we can discern is an example of *ipse dixit* reasoning, resting on a bare assertion by the examiner.

[1] With respect to the claim recitation "copper complexes of imines", we agree with appellant that his originally filed disclosure reasonably conveys to a person having ordinary skill in the art that he had possession of that subject matter. Although appellant originally used the term "copper complexes of . . . amines", we find that the skilled artisan would have understood this to be an inadvertent error and that "copper complexes of imines" was intended. In this regard, note particularly Table VIII of the original disclosure which lists working examples of imines falling within the scope of appellant's invention. Reading the original disclosure as a whole, as we must, we find it clear that "amines" was error, that "imines" was intended, and that this error would have been understood by a person having ordinary skill in the art.

[2] With respect to the claim recitations "binuclear copper complexes of carboxylic acids", a "binuclear copper complex of an aliphatic caboxylic acid", and "a binuclear \*1464 copper complex of an aryl carboxylic acid", we again agree with appellant that his originally filed disclosure reasonably conveys to the skilled artisan that he had possession of that subject matter. As pointed out by appellant in his Brief, the specification disclosure as filed presents five working examples of binuclear copper complexes of carboxylic acids. Four of those are representative of a binuclear copper complex of an aryl carboxylic acid and one is representative of a binuclear copper complex of an aliphatic carboxylic acid. Note particularly the pictorial representation in Figure I, page 7 of the specification as filed. Given those working examples together with the broader disclosure of copper complexes of carboxylic acids, both aliphatic and aromatic, we have no doubt that

3 U.S.P.Q.2d 1462  
1987 WL 124287 (Bd.Pat.App & Interf.)  
(Cite as: 3 U.S.P.Q.2d 1462)

appellant's disclosure *reasonably* conveys to the skilled artisan that appellant had possession of the subject matter now claimed.

For the reasons stated in appellant's Brief, as amplified above, the examiner's decision refusing to allow claims 25 through 27 is reversed.

*REVERSED.*

United States Court of Appeals,  
Federal Circuit.

~~UNION OIL COMPANY OF CALIFORNIA~~

Plaintiff-Appellee,

v.

ATLANTIC RICHFIELD COMPANY, Chevron  
U.S.A. Inc., Exxon Corporation, Mobil Oil  
Corporation, Shell Oil Products Company and  
Texas Refining and Marketing, Inc.

No. 99-1066.

March 29, 2000.

Rehearing and Rehearing En Banc Denied May 18,  
2000.

Petroleum refiners brought action against patentee, seeking a declaratory judgment to invalidate patent claiming automotive gasoline compositions designed to reduce automobile tailpipe emissions. Patentee counterclaimed, alleging willful infringement. After declaratory judgment action was effectively converted into infringement defense, jury found for patentee on issues of validity, and the United States District Court for the Central District of California denied refiners' motion for judgment as a matter of law (JMOL). The District Court, 34 F.Supp.2d 1208, 34 F.Supp.2d 1222, determined that patent was not unenforceable for inequitable conduct and awarded attorney fees. Refiners appealed. The Court of Appeals, Rader, Circuit Judge, held that: (1) patent claims were directed to compositions of matter and were not limited to only certain uses of those compositions; (2) patent claims were not anticipated by prior art; and (3) written description was adequate.

Affirmed.

Lourie, Circuit Judge, dissented in part and filed opinion.

West Headnotes

[1] Federal Courts ⇨765

170Bk765 Most Cited Cases

Court of Appeals reviews the district court's denial of a motion for judgment as a matter of law (JMOL) after a jury verdict by reapplying the district court's own standard; thus, to prevail on appeal, the appellants must show that substantial evidence does not support the jury's factual findings or that the district court erred in applying the law.

[2] Federal Civil Procedure ⇨2608.1

170Ak2608.1 Most Cited Cases

District court may overturn a jury's verdict on a motion for judgment as a matter of law (JMOL) only if, upon the record before the jury, reasonable persons could not reach the verdict returned by that jury.

[3] Federal Courts ⇨801

170Bk801 Most Cited Cases

In reviewing ruling on judgment as a matter of law (JMOL), Court of Appeals must consider the evidence of record in the light most favorable to the nonmovant, drawing all reasonable inferences in its favor, without disturbing the jury's credibility determinations or substituting Court's resolutions of conflicting evidence for those of the jury.

[4] Patents ⇨62(3)

291k62(3) Most Cited Cases

Party seeking to invalidate a patent on grounds of anticipation must show, by clear and convincing evidence, that the allegedly invalidating prior art contains each and every element of the claimed invention. 35 U.S.C.A. § 102.

[5] Patents ⇨112.1

291k112.1 Most Cited Cases

Issued patents enjoy a presumption of validity.

[6] Patents ⇨324.55(4)

291k324.55(4) Most Cited Cases

Court of Appeals reviews a finding that a patent was anticipated as a question of fact; therefore, on appeal, Court must affirm the district court's denial of a motion for a judgment as a matter of law seeking to establish anticipation if substantial

(Cite as: 208 F.3d 989)

evidence supports the jury's verdict that the cited prior art did not anticipate the claims. 35 U.S.C.A. § 102.

**[7] Patents ¶324.5**  
291k324.5 Most Cited Cases

First step in any analysis of alleged patent invalidity is claim construction, which is a question of law that Court of Appeals reviews without deference.

**[8] Patents ¶165(3)**  
291k165(3) Most Cited Cases

**[8] Patents ¶167(1)**  
291k167(1) Most Cited Cases

**[8] Patents ¶168(2.1)**  
291k168(2.1) Most Cited Cases

In patent claim construction the words of the claims are construed independent of the accused product, in light of the specification, the prosecution history, and the prior art; the construction of claims is simply a way of elaborating the normally terse claim language in order to understand and explain, but not to change, the scope of the claims.

**[9] Patents ¶179**  
291k179 Most Cited Cases

Patent claims directed to "[a]n unleaded gasoline suitable for combustion in an automotive engine" or "[a]n unleaded gasoline fuel suitable for combustion in a spark ignition automotive engine" claimed compositions of matter, so scope of claims did not embrace only certain uses of claimed compositions; if such limitation were permitted, composition claims would mutate into method claims.

**[10] Patents ¶72(1)**  
291k72(1) Most Cited Cases

Patent claims directed to "[a]n unleaded gasoline suitable for combustion in an automotive engine" or "[a]n unleaded gasoline fuel suitable for combustion in a spark ignition automotive engine" were limited to ordinary automotive fuel, and patent was thus not anticipated by other specialty fuels, which did not include each and every limitation of claims. 35 U.S.C.A. § 102.

**[11] Patents ¶99**  
291k99 Most Cited Cases

Where party challenges patent as having inadequate written description, the primary consideration is factual and depends on the nature of the invention and the amount of knowledge imparted to those skilled in the art by the disclosure. 35 U.S.C.A. § 112.

**[12] Patents ¶324.55(4)**  
291k324.55(4) Most Cited Cases

In reviewing district court's decision upon challenge to patent alleging inadequate written description, Court of Appeals reviews a jury's factual findings for substantial evidence. 35 U.S.C.A. § 112.

**[13] Patents ¶99**  
291k99 Most Cited Cases

Written description requirement does not require patent applicant to describe exactly the subject matter claimed, but the description must clearly allow persons of ordinary skill in the art to recognize that he or she invented what is claimed; thus, statutory requirement for written descriptions ensures that, as of the filing date, the inventor conveyed with reasonable clarity to those of skill in the art that he was in possession of the subject matter of the claims. 35 U.S.C.A. § 112.

**[14] Patents ¶324.55(4)**  
291k324.55(4) Most Cited Cases

Like the district court, Court of Appeals must accord deference to the jury findings on the adequacy of a patent's written description; Court will not substitute its judgment for that of the factfinder. 35 U.S.C.A. § 112.

**[15] Patents ¶99**  
291k99 Most Cited Cases

Written description in patent for automotive gasoline compositions designed to reduce automobile tailpipe emissions was adequate, even if specification did not describe exact chemical component of each combination that fell within ranges specified in patent claims, since description was sufficient to show one of skill in the petroleum refining art that inventor possessed the claimed

208 F.3d 989  
54 U.S.P.Q.2d 1227  
(Cite as: 208 F.3d 989)

Page 3

invention at the time of filing. 35 U.S.C.A. § 112.

[16] Patents ⇐99  
291k99 Most Cited Cases

Written description requirement does not require identical descriptions of claimed compounds, but it requires enough disclosure in the patent to show one of skill in this art that the inventor invented what is claimed. 35 U.S.C.A. § 112.

[17] Patents ⇐97  
291k97 Most Cited Cases

Applicants for patents and their representatives before the Patent and Trademark Office (PTO) are subject to a duty of candor, good faith, and honesty in their prosecution of patent applications, and a breach of this duty constitutes inequitable conduct. 37 C.F.R. § 1.56.

[18] Patents ⇐97  
291k97 Most Cited Cases

If a court determines that a patentee has engaged in inequitable conduct, the court must consider whether, as a matter of equity, the patent should be deemed unenforceable.

[19] Patents ⇐324.54  
291k324.54 Most Cited Cases

[19] Patents ⇐324.55(2)  
291k324.55(2) Most Cited Cases

Because inequitable conduct in the prosecution of a patent is an equitable issue, Court of Appeals reviews such determinations for an abuse of discretion, and Court will not disturb the district court's factual determinations of materiality and intent without a definite and firm conviction that a mistake has been committed.

Patents ⇐328(2)  
291k328(2) Most Cited Cases

5,288,393. Valid.  
\*991 Michael V. Ciresi, Robins, Kaplan & Ciresi, L.L.P., of Minneapolis, Minnesota, argued for plaintiff-appellee. With him on the brief were Martin R. Lueck, David W. Beehler, Tracy A. Sykes, and Diane L. Simerson.

E. Edward Bruce, Covington & Burling, of Washington, DC, argued for defendants-appellants. With him on the brief was Christopher N. Sipes. Of counsel on the brief were Donald R. Dunner, and J. Michael Jakes, Finnegan, Henderson, Farabow, Garrett & Dunner, L.L.P., of Washington, DC. Also of counsel on the brief were Harry C. Marcus, and Bartholomew Verdirame, Morgan & Finnegan, L.L.P., of New York, New York.

Before MAYER, Circuit Judge, LOURIE and RADER, Circuit Judges.

Opinion for the court filed by Circuit Judge RADER. Circuit Judge LOURIE dissents in part.

RADER, Circuit Judge.

The United States District Court for the Central District of California denied the appellants' motion for Judgment as a Matter of Law (JMOL) which sought to overturn the jury verdicts of patent validity and willful infringement. *See Union Oil Co. of Cal. v. Atlantic Richfield Co.*, No. CV-95-2379-KMW, slip op. at 1 (C.D.Cal. Mar. 10, 1998) (*Unocal I*). In their JMOL motion, the Atlantic Richfield Company and other appellant refiners asserted that Union Oil Company of California's (Unocal) United States Patent No. 5,288,393 ('393 patent) is invalid under 35 U.S.C. § 102 and 112 (1994). The district court also held that Unocal did not commit inequitable conduct before the U.S. Patent and Trademark Office (PTO). *See Union Oil Co. of Cal. v. Atlantic Richfield Co.*, 34 F.Supp.2d 1208, 1222 (C.D.Cal.1998) (*Unocal II*). Because the appellant refiners did not show a reversible flaw in the jury's verdict, this court affirms the district court's denial of JMOL on §§ 102 and 112 issues. Similarly, this court affirms the trial court's discretionary judgment of no inequitable conduct. [FN1]

FN1. Because the appellant refiners did not question the district court's willfulness determination in their appeal, this court does not address that issue.

Page 4

## I.

Unocal owns the '393 patent, which claims automotive gasoline compositions that reduce automobile tailpipe emissions. Unocal's original patent application contained 82 claims. As is often the case during the course of prosecution, the inventor added and canceled many claims. Ultimately, 155 claims issued, but Unocal later disclaimed all but the forty-one at issue in this case: claims 20, 53, 54, 56, 57, 71-75, 78, 79, 81, 112-16, 117 (multiply dependent on claims 53, 73, 78, 112, 116, and 125), claim 120 (multiply dependent on claims 55, 78, 79, and 124), claim 121 (dependent on claim 120 and therefore multiply dependent on claims 55, 78, 79 or 124), 125-27, 133-35, 137, 153, and 155. Each claim appears in dependent or multiple \*992 dependent form, and has from four to six limitations describing ranges for several of the fuel characteristics. Each claim effectively begins either with the preface "[a]n unleaded gasoline fuel suitable for combustion in an automotive engine" or "[a]n unleaded gasoline fuel suitable for combustion in a spark ignition automotive engine." As an example, Claim 117, as dependent upon claim 116, states: [FN2]

FN2. Because the claims are written in multiple dependent form, the claim elements that are incorporated from other claims have been paraphrased in brackets.

117. [An unleaded gasoline fuel suitable for combustion in an automotive engine, said fuel having a Reid Vapor pressure no greater than 7.0 psi, and a 50% D-86 distillation point no greater than 200° F., and a 90% D-86 distillation point no greater than 300° F., and a paraffin content greater than 85 volume percent, and an olefin content less than 4 volume percent] wherein the maximum 10% distillation point is 158° F (70° C.).

'393 patent, col. 24, ll. 24-27.

As illustrated above, the claims do not describe each gasoline product in terms of molecular structures or lists of ingredients. Instead, the claims specify the chemical properties of the gasolines, reflecting the way oil refiners formulate gasoline. When oil refiners formulate new gasoline products, they do so by mixing petroleum stocks.

Different stocks have different properties that are known to oil refiners. The record shows that oil refiners of ordinary skill in the art change the chemical properties of gasoline by varying the proportions of different petroleum stocks. Thus the claims which define the invention in terms of various characteristics also inform those of skill in the art of the composition of the claimed gasoline fuels.

Unocal researched extensively the production of automotive gasoline with reduced combustion emissions. Unocal's scientists, Drs. Jessup and Croudace, ultimately filed a patent application based on their findings. Their research taught ways to produce cleaner gasoline by varying the following chemical properties in automotive gasolines: Reid Vapor Pressure (RVP), T10, T50, T90, Olefins, Paraffins, Aromatics, [FN3] and Octane.

FN3. Although the '393 patent teaches increasing the aromatic content of automotive gasoline to reduce tailpipe emissions, the claims do not mention aromatic content.

RVP measures the partial pressure of a gasoline sample when heated to 100° F in a sealed container. *See id.* at col. 18, ll. 43-47. T10, T50 and T90 are abbreviations for percentage distillation points, as measured according to an industry standard procedure called "D-86." Each corresponds to the temperatures at which a given percentage of the gasoline sample enters a gaseous phase under specific experimental conditions. Thus, T10 is the 10% D-86 distillation point; T50 the 50% D-86 distillation point; and T90 the 90% D-86 distillation point. The olefins value describes the percentage of the gasoline comprised of olefins measured by volume. Olefins, otherwise known as alkenes, are open-chain hydrocarbons that contain at least one double bond. The paraffins value describes the percentage of the gasoline comprised of paraffins measured by volume. Paraffins, otherwise known as alkanes, are open-chain hydrocarbons that contain only single bonds. The aromatics value describes the percentage of the gasoline comprised of aromatics measured by volume. Aromatics, are compounds whose

Copr. © West 2003 No Claim to Orig. U.S. Govt. Works

208 F.3d 989  
54 U.S.P.Q.2d 1227  
(Cite as: 208 F.3d 989)

Page 5

properties resemble those of 6-carbon ring molecules that have an average of three intra-ring carbon-carbon double bonds (i.e., benzene). Octane, as used in the '393 patent, describes the knocking or detonation characteristics of a gasoline sample as compared with a reference fuel. The octane value is derived by testing gasoline in a special engine under specified experimental conditions, and comparing those results to identically tested reference blends of Isooctane and n-heptane.

\*993 Drs. Jessup and Croudace sought to reduce the levels of carbon monoxide (CO), nitrous oxide (NO<sub>x</sub>), and hydrocarbons (HC) emitted from automobile tailpipes. After considerable experimentation, Drs. Jessup and Croudace discovered relationships between the various petroleum characteristics described above and tailpipe emissions. Drs. Jessup and Croudace then patented their innovative fuel compositions, describing the new compositions by their characteristics.

The specification of the '393 patent describes relationships among automotive gasoline characteristics and fuel emissions, including the following:

1. Decreasing RVP is of primary importance, and decreasing T10 and olefin content are of secondary importance for reducing NO<sub>x</sub> emissions. *See* '393 patent, col. 2, ll. 21-29.
2. Decreasing T50 is of primary importance for reducing CO and HC emissions. *See id.* at ll. 7-11.
3. Increasing paraffin content and decreasing T50 are most effective for reducing CO emissions. *See id.* at col. 6, ll. 12-28.
4. Decreasing both olefin content and RVP are most effective for reducing NO<sub>x</sub> emissions. *See id.* at ll. 28-31.
5. HC emissions are most practically reduced by decreasing olefins and/or T50. *See id.* at ll. 46-50.
6. Any combination of the eight characteristics can be increased or decreased as described, and that the greater any individual characteristic is changed in the directions indicated, the better the result. *See id.* at col. 15, ll. 20-28.

The specification also provides specific numerical ranges for each characteristic. For example, the specification teaches:

1. CO and HC emissions can be minimized by

reducing T50 below 215° F, preferably below 195° F. *See id.* at col. 2, ll. 7-20.

2. NO<sub>x</sub> emissions can be minimized by (a) decreasing RVP to 8.0 psi or less (preferably below 7.0 psi); (b) decreasing olefins below 15% (preferably to essentially zero); or (c) decreasing T10 below 140° F. *See id.* at ll. 21-34.

3. The best NO<sub>x</sub> reductions are obtained when the olefins are below 15%, RVP is 7.5 psi or less, and T10 is below 140° F. *See id.* at ll. 44-50.

4. All three pollutants are reduced when T50 is 215° F or less and RVP is 8.0 psi or less, with greater reductions when olefins are below 10% or T10 is below 140° F, and still greater reductions when both olefins and T10 are reduced. *See id.* at ll. 54-64.

5. Further pollution reductions are possible when T50 is below 195° F, olefins are below 5% (preferably at essentially zero), T10 is below 120° F, and/or when RVP is below 7.0 psi. *See id.* at l. 64--col. 3, l. 3.

Elsewhere the specification describes the optimal ranges for five of the eight fuel characteristics in similar terms.

The specification also states that the gasolines are preferably unleaded, have an octane rating of at least 90, and fall most preferably within one or more of five volatility classes in American Society for Testing and Materials (ASTM) publication D4814-89 (included in Table 1 of the patent). *See id.* at col. 4, l. 66--col. 5, l. 13. Beyond the optimal ranges for individual characteristics, the '393 patent also discloses preferred fuel mixtures. In sum, the '393 disclosure describes with detail the benefits and methods of varying gasoline characteristics. The specification describes 1) the relationships among the eight individual fuel characteristics and CO, NO<sub>x</sub>, and HC emissions, 2) characteristics most important for emissions, and 3) specific desirable ranges for RVP, T10, T50, olefins, paraffins, and aromatics.

\*994 The appellant refiners originally sued Unocal in district court, seeking a declaratory judgment to invalidate the '393 patent. Unocal counterclaimed, alleging willful infringement of the '393 patent. The district court then construed the claims of the '393 patent, effectively converting the refiners' declaratory judgment action into an infringement defense. Then the district court tried those invalidity issues to a jury. During forty-nine days of

208 F.3d 989  
54 U.S.P.Q.2d 1227  
(Cite as: 208 F.3d 989)

Page 6

trial, the jury heard the testimony of numerous witnesses and considered hundreds of exhibits and demonstrations. See *Unocal I*, slip op. at 6. At the close of all evidence, the district court properly instructed the jury on the law, and presented the jury with a special verdict form. The verdict form required the jury to decide validity under § 102 and § 112 separately for each of the forty-one asserted claims. With respect to the § 112 questions, the trial court asked the jury to consider the '393 patent's specification, including the original claims of the application, as filed. See *Northern Telecom, Inc. v. Datapoint Corp.*, 908 F.2d 931, 938, 15 USPQ2d 1321, 1326 (Fed.Cir.1990) ("The original claims as filed are part of the patent specification."). In total, the trial court's special verdict form asked the jury 223 individual questions. After thirteen days of deliberation, the jury returned and answered affirmatively that sufficient written description supported each of the forty-one asserted claims, and that none was anticipated under § 102.

The appellant refiners then moved the district court to overturn the jury's verdict with a motion for JMOL based on anticipation, obviousness, and lack of written description. After reviewing arguments of both parties and the record, the district court found that "substantial evidence exists in the record regarding the written description to support the verdict that Drs. Jessup and Croudace had possession of the claimed subject matter." *Unocal I*, slip op. at 6. The district court similarly considered and rejected appellant refiners' arguments on anticipation and obviousness. See *id.* at 3-5.

The appellant refiners also argued that the '393 patent was unenforceable for inequitable conduct. The district court tried that issue itself and held that the refiners did not meet their burden of showing inequitable conduct by clear and convincing evidence. See *Unocal II*, 34 F.Supp.2d at 1222. The district court found the case exceptional, and therefore also awarded attorney fees to Unocal under 35 U.S.C. § 285 (1994).

The appellant refiners now appeal the district court's denial of JMOL on anticipation and written description. They also appeal the district court's inequitable conduct decision.

## II.

Copr. © West 2003 No Claim to Orig. U.S. Govt. Works

[1] This court reviews the district court's JMOL ruling after a jury verdict by reapplying the district court's own standard. See *Applied Med. Resources Corp. v. United States Surgical Corp.*, 147 F.3d 1374, 1376, 47 USPQ2d 1289, 1290 (Fed.Cir.1998). Thus, to prevail on appeal, the appellant refiners must show that substantial evidence does not support the jury's factual findings or that the district court erred in applying the law. See *id.*

[2][3] A district court may overturn a jury's verdict on a motion for JMOL only if, upon the record before the jury, reasonable persons could not reach the verdict returned by that jury. See *Perkin-Elmer Corp. v. Computervision Corp.*, 732 F.2d 888, 893, 221 USPQ 669, 673 (Fed.Cir.1984). This court must consider the evidence of record in the light most favorable to Unocal, drawing all reasonable inferences in its favor, without disturbing the jury's credibility determinations or substituting this court's resolutions of conflicting evidence for those of the jury. See *Applied Med.*, 147 F.3d at 1376-77.

## A.

[4][5] This court requires that a party seeking to invalidate a patent under § 102 \*995 show that the allegedly invalidating prior art contains "each and every element of [the] claimed invention." *Lewmar Marine, Inc. v. Barient, Inc.*, 827 F.2d 744, 747, 3 USPQ2d 1766, 1767 (Fed.Cir.1987). To prevail on anticipation at trial, the refiners had to prove their case by clear and convincing evidence. See *Verdegaal Bros. v. Union Oil Co.*, 814 F.2d 628, 631, 2 USPQ2d 1051, 1052-53 (Fed.Cir.1987). The law imposes this high burden because Unocal's patent, like any issued patent, enjoys a presumption of validity. See *id.*

[6] This court reviews a finding of anticipation as a question of fact. See *In re Graves*, 69 F.3d 1147, 1151, 36 USPQ2d 1697, 1700 (Fed.Cir.1995). Therefore, on appeal, this court must affirm the district court's denial of JMOL on anticipation if substantial evidence supports the jury's verdict that the cited prior art did not anticipate the claims.

[7][8] "The first step in any invalidity ... analysis is claim construction." See *Rockwell Int'l Corp. v. United States*, 147 F.3d 1358, 1362, 47 USPQ2d 1027, 1029 (Fed.Cir.1998). Claim construction is a question of law, which this court reviews without

208 F.3d 989  
54 U.S.P.Q.2d 1227  
(Cite as: 208 F.3d 989)

Page 7

deference. See *Georgia-Pacific Corp. v. United States Gypsum Co.*, 195 F.3d 1322, 1330, 52 USPQ2d 1590, 1597 (Fed.Cir.1999). "In claim construction the words of the claims are construed independent of the accused product, in light of the specification, the prosecution history, and the prior art.... [T]he construction of claims is simply a way of elaborating the normally terse claim language[ ] in order to understand and explain, but not to change, the scope of the claims." *Scripps Clinic v. Genentech, Inc.*, 927 F.2d 1565, 1580, 18 USPQ2d 1001, 1013 (Fed.Cir.1991) (internal quotation marks omitted).

[9] The claims of the '393 patent recite either "[a]n unleaded gasoline suitable for combustion in an automotive engine" or "[a]n unleaded gasoline fuel suitable for combustion in a spark ignition automotive engine." Thus, the '393 patent claims compositions of matter. The scope of these composition claims cannot, as the appellant refiners argue, embrace only certain uses of that composition. See *In re Spada*, 911 F.2d 705, 708, 15 USPQ2d 1655, 1657 (Fed.Cir.1990). Otherwise these composition claims would mutate into method claims. The district court correctly applied this principle, refusing to narrow the scope of the claimed compositions to specific uses.

[10] The district court read each claim in light of the specification, and concluded that the claims cover "fuels that will *regularly* be used in autos, not that conceivably could be." *Union Oil Co. of Cal. v. Atlantic Richfield Co.*, No. CV-95-2379-KMW, slip op. at 7 (C.D.Cal. May 19, 1997) (*Unocal III*). The district court thus construed the claims to cover only a narrow class of fuel compositions, namely only standard automotive gasoline. The district court correctly excluded from claim scope a broader class of petroleum formulations such as aviation fuels or racing fuels. The claim language confirms the district court's reading of the claims to cover mass market automotive gasoline. The claim language specifies fuels for an "automotive engine," not an aviation engine. See, e.g., '393 patent, col. 18, l. 65. Moreover the explicit reference to "unleaded gasoline" again invokes standard automotive fuels, rather than specialized fuels. See, e.g., *id.* at col. 18, l. 64.

The district court's interpretation also finds extensive support in the specification. The

patentees described the problem that their invention addressed:

One of the major environmental problems confronting the United States and other countries is atmospheric pollution (i.e., "smog") caused by the emission of gaseous pollutants in the exhaust gases from automobiles. This problem is especially acute in major metropolitan areas, such as Los Angeles, Calif., where the atmospheric conditions and the great number of automobiles account for aggravated air pollution.

\*996 *Id.* at col. 1, ll. 9-16. Similarly, the patentees describe their testing procedures and results in the specification. Specifically, the patentees used ordinary passenger automobiles in their tests. The '393 patent records the results of testing certain fuels in a 1989 Oldsmobile Calais, a 1988 Oldsmobile 98, a 1985 Ford Tempo, a 1990 Lincoln, a 1984 Chevrolet Caprice, a 1988 Honda Accord, a 1989 Ford Taurus, a 1990 Plymouth Shadow, a 1985 Chevrolet Suburban, and a 1990 Toyota Camry. See *id.* at fig. 9. None of these are aviation or racing vehicles.

Similarly, another passage provides context for the trial court's claim construction. The patentees describe their choice of test vehicles as follows:

A total of 22 different unleaded gasoline fuels was tested in a 1988 Oldsmobile Regency 98 automobile equipped with a 3800 cc V-6 engine. This automobile was selected because it represented a high sales volume product with close to the current state-of-the-art emission technology.

*Id.* at col. 7, ll. 61-6. The patentees tailored their research and their patent to ordinary fuels for use in standard passenger cars. Thus, the claim language, further informed by the specification, shows that the district court correctly read the claims to cover ordinary automotive fuel.

Because the '393 patent covers only standard automotive fuel, the district court correctly determined that specialty fuels within other limitations of the claims do not anticipate under 35 U.S.C. § 102. In other words, the aviation and racing fuels that allegedly invalidate the '393 claims do not anticipate because they do not contain each and every limitation of the claims. See *Verdegaal*, 814 F.2d at 631. Specifically, this alleged prior art does not include the limitation of being a standard automotive fuel composition.

208 F.3d 989  
54 U.S.P.Q.2d 1227  
(Cite as: 208 F.3d 989)

Page 8

Moreover, the record does not show that the aviation and racing fuels otherwise have the claimed characteristics of the particular standard automotive fuels recited in the '393 patent. While the record shows that some properties of the aviation and racing fuels coincide with the properties of the '393 patent's claims, the record does not show the presence of each and every limitation. An expert for the refiner appellants stated that the allegedly anticipatory Phillips B-35 racing fuel "is very different from typical [automotive fuel]." Tr. at 4782. When asked, "Is Unocal unleaded racing gasoline very different from typical motor gasoline?", the expert again answered "Yes." *Id.* at 5047. This expert similarly answered "yes" when questioned about whether the asserted aviation fuels were "very different" from typical motor gasoline. *See id.* at 5060.

The district court did not err in construing the claims of the '393 patent. Furthermore the record does not show each and every element of the asserted claims of the '393 patent present in any single prior art reference. Therefore, this court affirms the district court's denial of JMOL on anticipation.

#### B.

[11][12] The first paragraph of § 112 states that: "The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same." 35 U.S.C. § 112. In written description cases, "[t]he primary consideration is *factual* and depends on the nature of the invention and the amount of knowledge imparted to those skilled in the art by the disclosure." *In re Wertheim*, 541 F.2d 257, 262, 191 USPQ 90, 96 (CCPA 1976) (emphasis added). This court reviews a jury's factual findings for substantial evidence. *See B. Braun Med., Inc. v. Abbott Labs.*, 124 F.3d 1419, 1423, 43 USPQ2d 1896, 1899 (Fed.Cir.1997).

\*997 [13] The written description requirement does not require the applicant "to describe exactly the subject matter claimed, [instead] the description must clearly allow persons of ordinary skill in the art to recognize that [he or she] invented what is claimed." *In re Gosteli*, 872 F.2d 1008, 1012, 10

USPQ2d 1614, 1618 (Fed.Cir.1989) (citations omitted). Thus, § 112, ¶ 1 ensures that, as of the filing date, the inventor conveyed with reasonable clarity to those of skill in the art that he was in possession of the subject matter of the claims. *See Vas-Cath Inc. v. Mahurkar*, 935 F.2d 1555, 1563-64, 19 USPQ2d 1111, 1117 (Fed.Cir.1991).

In the course of the lengthy jury trial, the district court heeded this court's counsel to use special verdicts in complex cases. *See Comark Communications, Inc. v. Harris Corp.*, 156 F.3d 1182, 1189 n. 1, 48 USPQ2d 1001, 1006 n. 1 (Fed.Cir.1998). The district court presented the jury with a verdict form asking it to decide separately whether each of the claims met the written description requirement. Following these instructions, the jury returned its verdict answering affirmatively forty-one separate times that sufficient written description supported each of the asserted claims.

[14] After the jury's verdict, the appellant refiners renewed their motion for JMOL to overturn the jury's verdict. *See Fed.R.Civ.P.* 50(b). The district judge then reconsidered the patent documents independently in light of all the evidence and denied the JMOL motion, thus upholding the jury's verdicts. Like the district court, this court must accord deference to the jury findings on written description. This court will not substitute its judgment for that of the fact finder. *See General Electro Music Corp. v. Samick Music Corp.*, 19 F.3d 1405, 1412, 30 USPQ2d 1149, 1155 (Fed.Cir.1994).

[15] On the record in this appeal, substantial evidence amply supports the jury's findings and the trial judge's JMOL ruling. The '393 patent teaches the effects of varying the properties of automotive gasolines to reduce harmful tailpipe emissions. In the art of gasoline production, skilled refiners obtain raw petroleum products and mix them together to achieve a desired product. Each product is the mixture of many chemicals in varying proportions. The '393 patent teaches that changes in the proportions of different hydrocarbon-containing streams mixed to produce gasoline with specific properties reduces the amount of NOx, CO, and hydrocarbons emitted from an automobile engine. Varying one or more properties in turn affects other properties of a

208 F.3d 989  
 54 U.S.P.Q.2d 1227  
 (Cite as: 208 F.3d 989)

gasoline product. Therefore, the patent claims its inventive products in terms of ranges of chemical properties, which work in combination with ranges of other chemical properties to produce a gasoline that reduces emissions.

Appellant refiners assert that the specification does not describe the exact chemical component of each combination that falls within the range claims of the '393 patent. However, neither the Patent Act nor the case law of this court requires such detailed disclosure. *See In re Hayes Microcomputer Prods., Inc.*, 982 F.2d 1527, 1533, 25 USPQ2d 1241, 1245 ("[The applicant] does not have to describe exactly the subject matter claimed."); *Vas-Cath*, 935 F.2d at 1566 ("ranges found in applicant's claims need not correspond exactly to those disclosed in [the specification]; issue is whether one skilled in the art could derive the claimed ranges from the [ ] disclosure."). Rather, the Patent Act and this court's case law require only sufficient description to show one of skill in the refining art that the inventor possessed the claimed invention at the time of filing.

Drs. Jessup and Croudace described their invention in terms of ranges. That form of description does not offend § 112, ¶ 1. In fact, this invention lends itself to description in terms of ranges and variance of those ranges to achieve particular properties of the gasoline products. The inquiry for adequate written description \*998 simply does not depend on a particular claim format, but rather on whether the patent's description would show those of ordinary skill in the petroleum refining art that the inventors possessed the claimed invention at the time of filing.

In this case, the patent teaches one of ordinary skill that reducing T50 progressively reduces CO and hydrocarbons; reducing olefins progressively reduces NOx and hydrocarbons; increasing paraffins progressively reduces CO and NOx; and so forth with several other relationships. Then the patent claims ranges for these properties that provide cleaner gasoline emissions. The Background and Abstract portions of the specification discuss thoroughly the claimed ranges and the combinations of multiple properties.

For example, the written description supporting a single claim - claim 117-- follows: [FN4]

FN4. One of this court's predecessor courts clarified that disclosure in an originally filed claim satisfies the written description requirement. *See In re Gardner*, 480 F.2d 879, 880, 178 USPQ 149 (CCPA 1973) ("Under these circumstances, we consider the original claim in itself adequate 'written description' of the claimed invention. It was equally a 'written description' ... whether located among the original claims or in the descriptive part of the specification.").

208 F.3d 989

 (Cite as: 208 F.3d 989)

Page 10

Claim limitation	Support in '393 patent
T50 at $\leq 200^{\circ}$	Col. 14, ll. 9-15: "no greater than $210^{\circ}$ F., . . . but preferably . . . less than $200^{\circ}$ F. . . ."
RVP at $\leq 7.0$ psi	Col. 14, ll. 36-40: "Reid Vapor Pressure specification of 8.0 psi . . . even more preferably no greater than 7.0 psi . . ."
Olefin at $< 4.0$ volume percent	Col. 14, ll. 23-30: "varying the olefin content, this value is generally maintained less than 15 volume percent, with decreasing values providing progressively improved results. Thus, it is contemplated that each unit reduction, e.g., to values below . . . 4 . . . providing progressively better results. . . ."
Paraffin at $> 85$ volume percent	Col. 14, ll. 49-64: "progressively increasing the paraffin content progressively decreases the CO emitted. Accordingly . . . the paraffin content would be increased to . . . and most preferably of all above 85 volume percent. . . ."
T90 at $\leq 300^{\circ}$	claimed exactly in original claim 29*
T10 at $\leq 158^{\circ}$	Col. 5, lls. 6-30: Table 1 shows maximum T10 distillation temperatures for all five volatility classes at 158 or below.

(Emphasis added.)

The specification further guides the skilled artisan in combining the above properties: "It will also follow that one can increase or decrease any combination of the eight properties listed above, i.e., at least two, at least three, at least four, etc., of the properties can be increased or decreased in the direction indicated above, as well as all eight." '393 patent, col. 15, ll. 20-25. The record of the trial contains testimony and exhibits showing in similar terms the written description and support for each of the forty-one claims.

To reiterate, this court supplies the written description supporting another claim, claim 125, as follows:

\*999

208 F.3d 989  
54 U.S.P.Q.2d 1227  
(Cite as: 208 F.3d 989)

Page 11

Claim limitation	Support in '393 patent
T50 at $\leq 205^\circ$	Col. 2, ll. 17-18: "Preferred fuels have a 50% D-86 Distillation Point of $205^\circ$ F. ( $96.1^\circ$ C) or less."
RVP at $\leq 7.0$ psi	Col. 14, ll. 38-40: "Reid Vapor Pressure specification of 8.0 psi . . . even more preferably no greater than 7.0 psi . . ."
Olefin at $< 8.0$ volume percent	Col. 14, ll. 23-30: "varying the olefin content, this value is generally maintained less than 15 volume percent, with decreasing values providing progressively improved results. Thus, it is contemplated that each unit reduction, e.g., to values below . . . 6 . . . providing progressively better results. . . ."
Paraffin at $> 75$ volume percent	Col. 14, ll. 49-59: "progressively increasing the paraffin content progressively decreases the CO emitted. Accordingly . . . the paraffin content would be increased to . . . [and] even more preferably above 75 volume percent. . . ."

(Emphasis added.)

Beyond this evidence from the patent itself, skilled refiners testified that the specification taught them that the inventor possessed the emission-reducing gasolines at the time of filing. For example, when questioned, Richard Stellman, an expert in the field, stated:

Q: Does the patent teach one of ordinary skill in the art such as yourself to alter two or more of the properties in a particular - in the prescribed fashion in order to affect all three of the criteria pollutants?

A: Yes, it does.

Q: And does the patent set forth values from which one of ordinary skill in the art can practice the invention?

A: Yes, it does.

Tr. at 2515.

The patent unmistakably informs skilled refiners to increase or decrease the various components to arrive at preferred combinations. In fact, the written description usually labels both preferred and most preferred levels within each range. Skilled refiners testified that they knew the composition of the claimed combinations based on this written description. Contrary to appellant refiners' arguments to this court, the record shows that refiners of ordinary skill understood and applied the '393 patent's teachings. In sum, the record shows that the inventors possessed the claimed invention at the time of filing in the assessment of those of ordinary skill in the petroleum refining art. [FN5] Moreover, the jury in this case reached the same conclusion as a matter of fact--a proposition that this court cannot disturb on this record which

supplies substantial evidence to support that finding.

FN5. The dissent contends that the specification does not show that the inventors possessed the amended claims at the time of filing. In its arguments, the dissent discounts the skill in this art, which, the jury found, knows the composition of gasolines from the specification's description of characteristics. Further, the dissent discounts the jury's role in finding, as a matter of fact, that the inventor satisfied the written description requirement, preferring instead its own "findings" about the knowledge of skilled artisans and about the sufficiency of the disclosures.

The appellant refiners attempt to rescue their written description argument by focusing on the T90 levels cited in claims 74, 81, 116, 117, and 127. Appellant refiners allege that the "specification provides no specific T90 values . . . [and that a]lthough five of the original application claims recited combinations including a T90 limitation, they bear no resemblance to the remaining claims with T90 limitations." Appellants' Br. at 46. Appellant refiners misapprehend the teachings of T90 levels. The '393 \*1000 patent teaches that lowering the T90 distillation point below prior art standards for automotive gasolines creates the desired effect. See '393 patent, col. 2, l. 1. The standards set forth in Table 1 of the '393 patent

208 F.3d 989  
54 U.S.P.Q.2d 1227  
(Cite as: 208 F.3d 989)

Page 12

describe the ASTM standards for gasolines that have T90 distillation points between 365 and 374° F. The T90 distillation points in the originally filed claims were less than or equal to either 315 or 300° F, thus substantially lower than in the prior art gasolines. The claimed ranges of the originally filed claims are the same as those set forth in the six claims of the issued '393 patent that contain T90 limitations. In other words, the disclosure at the time of filing taught one of skill in the art that the inventors possessed the subject matter of the later claims. Even if appellant refiners' argument were correct, that analysis only addresses the validity of five claims, leaving the remaining thirty-six claims.

Appellant refiners argue that *In re Ruschig*, 54 C.C.P.A. 1551, 379 F.2d 990, 154 USPQ 118 (CCPA 1967), supports their argument. This court's predecessor discussed in *Ruschig* whether a claim for a particular pharmaceutical compound copied into a patent application for the purposes of provoking an interference was adequately supported by the written description of a class of compounds. *Ruschig* is different than this case for several reasons. First, the *Ruschig* case involved a copied claim (another inventor's claim copied into Ruschig's application), which did not find support in Ruschig's application because Ruschig had invented and disclosed a broad set of the compounds that was similar, but not entirely within the scope of the claim. Because another inventor, not Ruschig, drafted the claim at issue to fit another specification, it is not surprising that the disputed claim did not find support in Ruschig's specification, even though the inventions were similar. In this case however, the claims, although amended in the course of prosecution, were drawn to the inventions of Jessup and Croudace, who drafted the claims with support from their own specification.

Second, as this court's predecessor explained in distinguishing *Ruschig* in another case involving ranges:

If lack of literal support alone were enough to support a rejection under § 112, then the statement of *In re Lukach* ... that "the invention claimed does not have to be described *in ipsi verbis* in order to satisfy the description requirement of § 112," is empty verbiage.

*Wertheim*, 541 F.2d at 265. As in this case, in *Wertheim* the asserted claims covered a range

("solids level of at least 35%"), *id.* at 258, whereas the specification disclosed a broader range ("concentrated ... until a concentration of 25 to 60% solid matter is reached"), *id.* at 262 (internal quotation marks omitted). In *Wertheim* the CCPA held that the specification supported the claimed range, even though the precise range of the claim was not repeated verbatim in the specification, as the dissent in this case would appear to require. In so holding, the court cautioned that it would "let form triumph over substance" if it allowed the written description requirement to eviscerate claims that are narrowed during prosecution, simply because the patent applicant broadly disclosed in the original patent application but then narrowed his claims during prosecution. See *id.* at 263. Additionally, *Wertheim* reiterates the often cited rule that written description questions are intensely factual, and should be dealt with on a case-by-case basis, without the application of wooden rules. See *id.* at 262. Thus, *Wertheim* fully supports the result in this case and limits the applicability of *Ruschig*.

Our predecessor court in *Ruschig* expressed concern over the extent to which the patentee relied on variables in describing structures, leading that court to explain that rather than blaze marks on trees, the patentee had simply provided the public with a forest of trees. Artisans skilled in petroleum refining, in contrast, \*1001 are aware of the properties of raw petroleum sources and know how to mix streams of such sources to achieve a final product with desired characteristics. Thus the patentee in this case taught the desired characteristics of the final automotive fuels, realizing that those of skill in this art know that those characteristics define the claimed products.

A closer case for assessing the facts of written description in these forty-one verdicts--one which dealt with ranges and combinations--is *Ralston Purina Co. v. Far-Mar-Co, Inc.*, 772 F.2d 1570, 1575, 227 USPQ 177, 179 (Fed.Cir.1985). In *Ralston*, a case in which this court applied the less deferential clear error standard appropriate for this court's review of bench verdicts, this court noted that the ranges in applicant's claims need not correspond exactly to those disclosed in the parent application. See *id.* at 1575. Rather, this court clarified that the issue is whether one of skill in the art could derive the claimed ranges from the parent's disclosure. See *id.*; see also *Vas-Cath*,

208 F.3d 989  
 54 U.S.P.Q.2d 1227  
 (Cite as: 208 F.3d 989)

Page 13

935 F.2d at 1566 (holding that the district court erred in "applying a legal standard that essentially required the drawings of the '081 design application to necessarily exclude all diameters other than those within the claimed range."). Because of the fact-sensitive nature of the written description inquiry, this court has often warned against misapplication of precedents in this area. *See Vas-Cath*, 935 F.2d at 1562 (citing *In re Driscoll*, 562 F.2d 1245, 1250, 195 USPQ 434, 438 (CCPA 1977)). This case illustrates the reason for that warning. *Ralston* governs this case.

[16] The written description requirement does not require identical descriptions of claimed compounds, but it requires enough disclosure in the patent to show one of skill in this art that the inventor "invented what is claimed." *Vas-Cath*, 935 F.2d at 1563. On this precise question the jury received many days of testimony, heard from skilled refiners, reviewed graphs and claim charts, and examined the patent documents as guided by those skilled in the art. Indeed the district court, which also heard all the evidence from those of skill in the art, stated: "[T]he Court finds that substantial evidence exists in the record regarding written description to support the verdict that Drs. Jessup and Croudace had possession of the claimed subject matter." *Unocal I*, slip op. at 6. This court agrees. Because the record shows substantial evidence of adequate written description for each claim as the jury found, this court affirms.

### III.

[17][18][19] Applicants for U.S. patents and their representatives before the PTO are subject to a duty of candor, good faith and honesty in their prosecution of patent applications. *See* 37 C.F.R. § 1.56 (1999). "A breach of this duty constitutes inequitable conduct." *Molins PLC v. Textron, Inc.*, 48 F.3d 1172, 1178, 33 USPQ2d 1823, 1826 (Fed.Cir.1995). If a court determines that a patentee has engaged in inequitable conduct, the court must consider whether, as a matter of equity, the patent should be deemed unenforceable. *See LaBounty Mfg., Inc. v. ITC*, 958 F.2d 1066, 1070, 22 USPQ2d 1025, 1028 (Fed.Cir.1992). Because as the name suggests, inequitable conduct is an equitable issue, this court reviews such determinations for an abuse of discretion. *See Kingsdown Med. Consultants, Ltd. v. Hollister Inc.*, 863 F.2d 867, 876, 9 USPQ2d

1384, 1392 (Fed.Cir.1988) (*en banc* in relevant part). Moreover this court will not disturb the district court's factual determinations of materiality and intent without a "definite and firm conviction that a mistake has been committed." *Id.*

In this case, the district court issued a thorough and well reasoned opinion that shows consideration of the fundamental issues of inequitable conduct. Specifically, the district court noted that the allegedly withheld test data would not have been material to the patentability of the claims. \*1002 *See Molins*, 48 F.3d at 1179. The district court also found no intent to deceive by withholding the disputed test records, but instead determined that Unocal acted in good faith during the prosecution. This court detects no clear error in these findings and no abuse of discretion in the district court's determination of no inequitable conduct.

### IV.

Because the record contains substantial evidence to support the jury's verdicts of no anticipation and sufficient written description, this court affirms the district court's denial of JMOL. Similarly, this court affirms the district court's inequitable conduct determination.

### COSTS

Each party shall bear its own costs.

*AFFIRMED.*

LOURIE, Circuit Judge, dissenting in part.

Because the jury's verdict that the claims are not invalid for lack of written description is not supported by substantial evidence, I would reverse the district court's denial of the motion for JMOL, hold the relevant claims to be invalid, and vacate the damages and attorney fees awarded to Unocal. Because the district court did not abuse its discretion in concluding that Unocal did not engage in inequitable conduct, I would affirm that decision. I would not reach the anticipation issue.

Unocal's '393 patent is directed to specific gasoline compositions, albeit compositions defined by ranges of properties. No matter how an invention

(Cite as: 208 F.3d 989)

Page 14

is claimed, it must be described in the specification. The claimed compositions were not so described. The majority supports its affirmance of the denial of the JMOL using enablement reasoning. It points to the numerous references in the specification to teachings of the various ways one may obtain particular combinations of properties for the fuels. These are *general* descriptions of how to make fuel compositions, not descriptions of the *claimed* compositions. They may also constitute descriptions of *processes* for obtaining various *characteristics* of fuel compositions, but it is specific *compositions* that are claimed here, not processes. There are written descriptions of other particular compositions in the specification, but they are not written descriptions of the inventions claimed here. It is in fact undisputed that the specification discloses no distinct embodiments corresponding to any claim at issue.

The majority supports its decision in part with two charts purporting to show detailed support in the specification for claims 117 and 125. However, the description that the majority provides, with commendable thoroughness, shows the weakness of its conclusion. The claimed compositions do not appear in the specification as such. The charts were synthesized by pulling together various directions in the specification in order to constitute the claimed compositions. Note the references to different parts of the specification for the various components. The patent does not contain such complete descriptions of those compositions; they were presumably prepared after the grant of the patent for purposes of litigation by Unocal. Erroneously, they were accepted by the jury, the trial judge, and the appellate majority.

Unocal's original application contained 82 claims. During the course of prosecution, 161 claims were added and 47 canceled. Ultimately, 196 claims issued, but Unocal later disclaimed all but the 41 at issue in this case. None of these claims were in the original application; all were added by amendment.

The written description requirement ensures that, at the time a patent application is filed, the inventor has possession of the invention claimed. See *\*1003 Vas-Cath v. Mahurkar*, 935 F.2d 1555, 1563, 19 USPQ2d 1111, 1116 (Fed.Cir.1991). It also serves the obvious purpose of telling the public what it is that has been invented. Possession of the invention

at the time of filing is best shown by a precise description in the text of the patent specification of all of the aspects of the claimed invention. It is well-established that each claim in a patent constitutes a separate invention, see, e.g., *Jones v. Hardy*, 727 F.2d 1524, 1528, 220 USPQ 1021, 1024 (Fed.Cir.1984); thus, a written description of the invention of each claim as such must be provided if the statutory requirement is to be met as to that claim.

It is true that a patent need not describe the claimed subject matter in precisely the same terms as used in the claims, see *Vas-Cath*, 935 F.2d at 1563-64, 19 USPQ2d at 1116; however, it must still describe the invention with all its claimed limitations in some manner, see *Lockwood v. American Airlines, Inc.*, 107 F.3d 1565, 1572, 41 USPQ2d 1961, 1966 (Fed.Cir.1997); *In re Wertheim*, 541 F.2d 257, 262, 191 USPQ 90, 96 (CCPA 1979). "Precisely how close the original description must come to comply with § 112 must be left to case-by-case development." *Vas-Cath*, 935 F.2d at 1561, 19 USPQ2d at 1116 (citing *In re Smith*, 59 C.C.P.A. 1025, 458 F.2d 1389, 1395, 173 USPQ 679, 683 (CCPA 1972)).

It is clear beyond peradventure that there is no written description of any of the claimed compositions as such. There surely is a description of most of the particular *claim limitations* of the various claims, but that is not the same as a description of a *specific composition* described by a particular selection of those characteristics. If the written description does not use precisely the same terms used in a claim, the question then is whether the specification directs or guides one skilled in the art to the subject matter claimed. See, e.g., *Fujikawa v. Wattanasin*, 93 F.3d 1559, 1570, 39 USPQ2d 1895, 1904 (Fed.Cir.1996). One of our predecessor courts analogized the requirement that the written description direct one to the claimed subject matter to "blaze marks" on specific trees that mark a trail through a forest. See *In re Ruschig*, 54 C.C.P.A. 1551, 379 F.2d 990, 994-95, 154 USPQ 118, 122 (CCPA 1967). It found that a broad generic disclosure failed to constitute a description of a specific claimed compound. We have subsequently stated that without such specific direction, a general disclosure will not be sufficient to support narrowly claimed subject matter. See *Fujikawa*, 93 F.3d at 1571, 39 USPQ2d at 1905

Page 15

("In the absence of [ ] blazemarks [that the claimed compounds were of special interest], simply describing a large genus of compounds is not sufficient to satisfy the written description requirement as to particular species or subgenuses."). That direction must be expressed in "full, clear, concise, and exact" language. See *Fields v. Conover*, 58 C.C.P.A. 1366, 443 F.2d 1386, 1391, 170 USPQ 276, 280 (CCPA 1971); *In re Ahlbrecht*, 58 C.C.P.A. 848, 435 F.2d 908, 911, 168 USPQ 293, 296 (CCPA 1971); *Ruschig*, 379 F.2d at 996, 154 USPQ at 123.

Each of the claims at issue here recites a fuel having a specific combination of different fuel characteristics. Although the specification separately describes most of the individual characteristics of the combinations, it is undisputed that none of the claims at issue is matched in the specification by the combination of characteristics required by that claim. A reasonable juror could not find that the application shows possession of those combinations of characteristics by blazing a clear trail to them.

Unocal points to descriptions of individual fuel characteristics at column 14 of the specification, as well as to the prosecution history. However, column 14 simply outlines the range of variation of T10 and T50, olefin content, and RVP in order to obtain emission reductions. This is an enablement disclosure, not a description of particularly claimed compositions. Describing these individual fuel characteristics in broad terms is not the same as describing \*1004 an invention reciting specific combinations of fuel characteristics. The question is not whether each of the claim limitations finds support in the specification but whether the inventions claimed, fuels having *specific combinations of characteristics*, finds such support. The simple direction to adjust more than one fuel characteristic at a time does not direct one to, and thus does not show possession of, any of the claimed combinations of fuel characteristics. One must pick and choose among eight different types of fuel characteristics, broadly described, in order to arrive at any of the claimed combinations.

For example, as indicated earlier, to arrive at one of the combinations described in claim 117, Unocal had to pick through the specification to find the claimed limitations. Four of the limitations--the

T50, RVP, olefin, and paraffin limitations--fell within ranges *broadly described*, but there is no direction to a composition having all of these limitations in the *particular ranges claimed*. Furthermore, no specific T90 ranges are described anywhere in the specification except in Table 1, which recites only certain general ASTM standards. Unocal had to point to an original, canceled claim to support the T90 value chosen, but that characteristic was part of a composition no longer claimed and no longer part of the specification. Lastly, the specification repeatedly describes fuels with a T10 less than 140° F, but the claim recites a fuel with a maximum T10 of 158° F. The specification's only recitation of a fuel with a T10 of 158° F is one of the ASTM standards in Table 1, not a part of a described embodiment of the invention. By picking and choosing, one can thus find all of the limitations, but the specification gives no direction, let alone the "full, clear, concise, and exact" direction required, to the claimed combination. The same picking and choosing is required to arrive at all of the claims asserted. When one has to pick and choose among a wide range of variables to construct a claim, the subject matter of that claim has not been described as required by the statute; possession has not been demonstrated.

Unocal makes numerous references to what the specification teaches. It does so by referring to general descriptions of the possible variables. The specification does in fact contain a written description of methods for lowering auto emissions. It also teaches how to make various *types* of compositions and methods, but does not contain a written description of the *specifically claimed* compositions. It is well settled that the enablement requirement is separate and distinct from the written description requirement of § 112, ¶ 1, see *Vas-Cath*, 935 F.2d at 1563, 19 USPQ2d at 1117, and that a specification may enable one skilled in the art to make and use an invention and yet still not describe it, see *id.* at 1562, 935 F.2d 1555, 19 USPQ2d at 1115. Whether the specification fulfills the enablement requirement by teaching how to make the claimed combinations is not before us; the fact remains that it does not describe any one of the claimed compositions. In fact, the extensive recitation of differing ranges and preferences for particular characteristics is in stark contrast to the lack of any specific description of a composition,

 (Cite as: 208 F.3d 989)

Page 16

particularly a composition set forth in the current claims.

Unocal's reference to the broad ranges of the characteristics of the various gasolines also may be an adequate written description of a generic group of gasolines defined broadly by those characteristics. However, such a generic claim is not before us. We only have claims defining compositions by a specific set of claim limitations, none of which compositions finds a specific description in the patent specification. In *Ruschig*, the Court of Customs and Patent Appeals held that a general formula containing variables that each include a number of possible groups does not describe each composition within its scope. The court stated that "[s]pecific claims to single compounds require reasonably specific supporting disclosure...." \*1005 *Ruschig*, 379 F.2d at 994, 154 USPQ at 122. The same applies to the specific compositions here. The court in *Ruschig* found certain alleged "guides" in the specification inadequate, stating that "we are looking for blaze marks which single out particular trees. We see none." *Id.* at 995, 54 C.C.P.A. 1551, 379 F.2d 990, 154 USPQ at 122. The court distinguished the written description requirement from enablement, which it considered might have been satisfied by the specification. *See id.* *Ruschig* is directly pertinent to the present case, and the fact that Unocal's patent claims multiple species of compositions in no way lessens the force of *Ruschig* as relevant precedent here. Each of the claims in the '393 patent suffers from the same defect.

Attempting to distinguish *Ruschig*, the majority asserts that this is a *Ralston Purina* case, but the *Ralston Purina* opinion itself states that written description cases must be decided on a case-by-case basis. *See Ralston Purina Co. v. Far-Mar-Co, Inc.*, 772 F.2d 1570, 1575, 227 USPQ 177, 179 (Fed.Cir.1985). In finding satisfaction of that requirement, it distinguishes a number of cases in which the requirement was not met "due to a number of different factors." *See id.* The case-by-case analysis advocated in *Ralston Purina* leads in this case to the reality that the requirement has not been satisfied.

I recognize that this is a jury trial and that the written description requirement is a question of fact concerning which we owe considerable deference.

However, jury verdicts are not irreversible if substantial evidence is lacking. Substantial evidence is that minimum quantum of evidence from which a reasonable jury might afford relief. *See Anderson v. Liberty Lobby, Inc.*, 477 U.S. 242, 249-50, 106 S.Ct. 2505, 91 L.Ed.2d 202 (1986) (holding that "merely colorable" or "not significantly probative" evidence is insufficient to meet the substantial evidence standard); *Consolidated Edison Co. v. NLRB*, 305 U.S. 197, 229, 59 S.Ct. 206, 83 L.Ed. 126 (1938) ("Substantial evidence is more than a mere scintilla. It means such relevant evidence as a reasonable mind might accept as adequate to support a conclusion."). If a reasonable jury could not have found the facts necessary to support a verdict, the trial judge or reviewing court should reverse.

This is a highly complicated case, involving a patent that is difficult to fathom. One needs to analyze these claims the way one plans a trip, with a road map, in detail, on paper. Multiple claim dependencies and multiple claim limitations make the task difficult. The complexity of the case is further increased by the way in which the patent application was prosecuted, with wholesale cancellation and addition of claims seemingly irrespective of whether their subject matter was properly disclosed. It is easy to see how one could go astray.

A reasonable juror is one who has done his or her homework, as described above, in order to determine what each claim covers, and where in the specification there is support for such claims. The result here speaks for itself. When such analysis is performed here, it is plain that the claimed compositions are not described in the patent. No reasonable jury, carefully reading and examining the patent specification, could conclude otherwise, i.e., that the patent specification's descriptions of individual fuel characteristics or the teachings that multiple fuel characteristics can be varied in particular ways constitutes a sufficient written description of the compositions of any of the claims. I therefore respectfully dissent from the conclusion of the majority that the claims have not been shown to be invalid.
